

Notification Configuration using Flow Designer & UI Policy Creation

Overview

The **Notification Configuration using Flow Designer & UI Policy Creation** phase implements proactive SLA governance by automating notifications and enforcing mandatory data capture using native ServiceNow features. The solution continuously monitors the progress of Incident Resolution SLAs through the **Task SLA** table and automatically detects when an incident reaches a predefined SLA risk threshold.

When the SLA reaches **80% of the allocated business time**, the Flow Designer workflow is triggered. The workflow retrieves the associated Incident, marks it as **SLA At Risk**, updates the work notes, and sends automated email notifications to both the assigned user and the user's manager.

To ensure governance compliance, **UI Policies** dynamically make the **SLA Breach Reason**, **SLA Breach Justification**, and **SLA Acknowledgement** fields mandatory whenever an Incident is identified as being at risk. This phase eliminates manual monitoring, improves user awareness, strengthens accountability, and supports audit-ready SLA governance.

Objectives

The objectives of this phase are to:

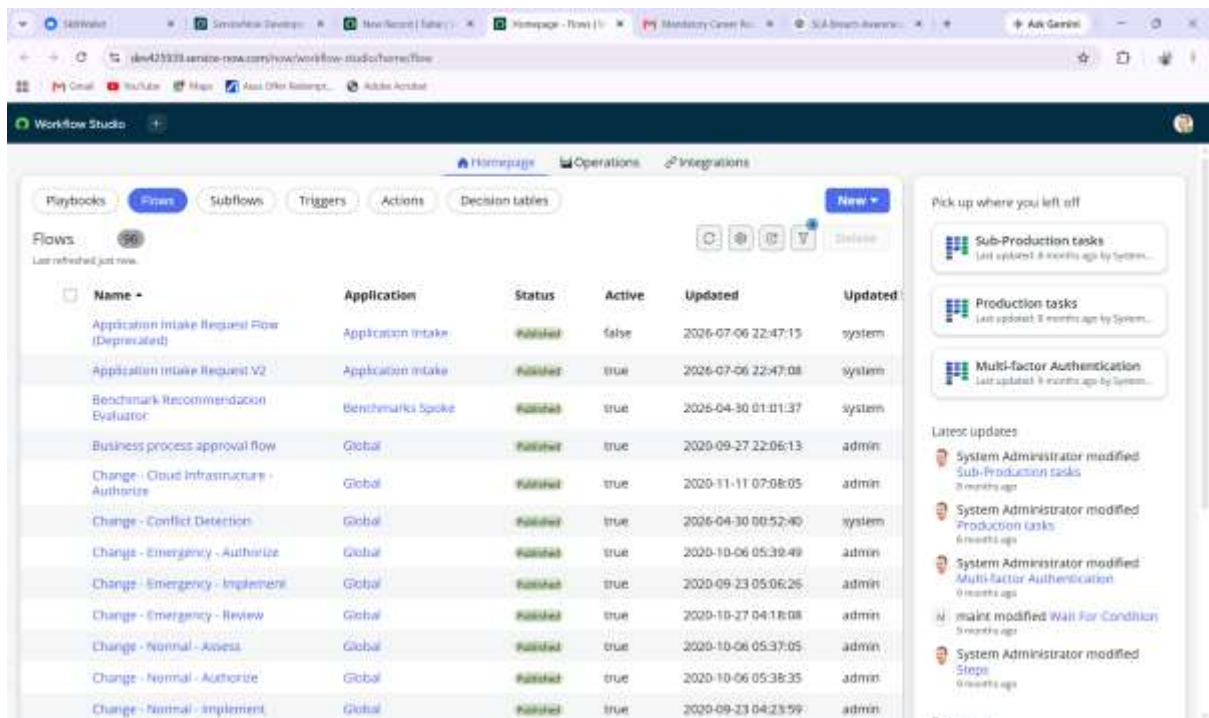

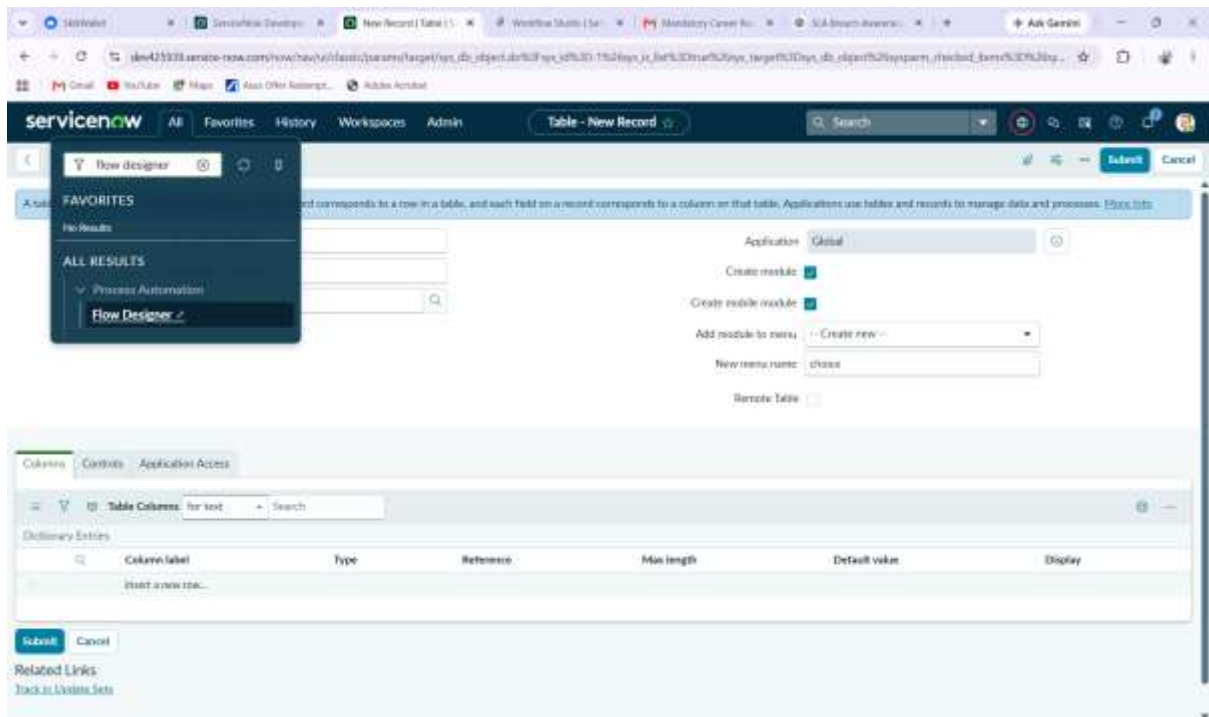

- Continuously monitor SLA progress.
 - Detect incidents approaching SLA breach.
 - Automatically update Incident records.
 - Notify Incident assignees through email.
 - Notify managers for governance visibility.
 - Enforce mandatory SLA documentation.
 - Improve accountability and SLA compliance.
 - Reduce manual intervention using automation.
-

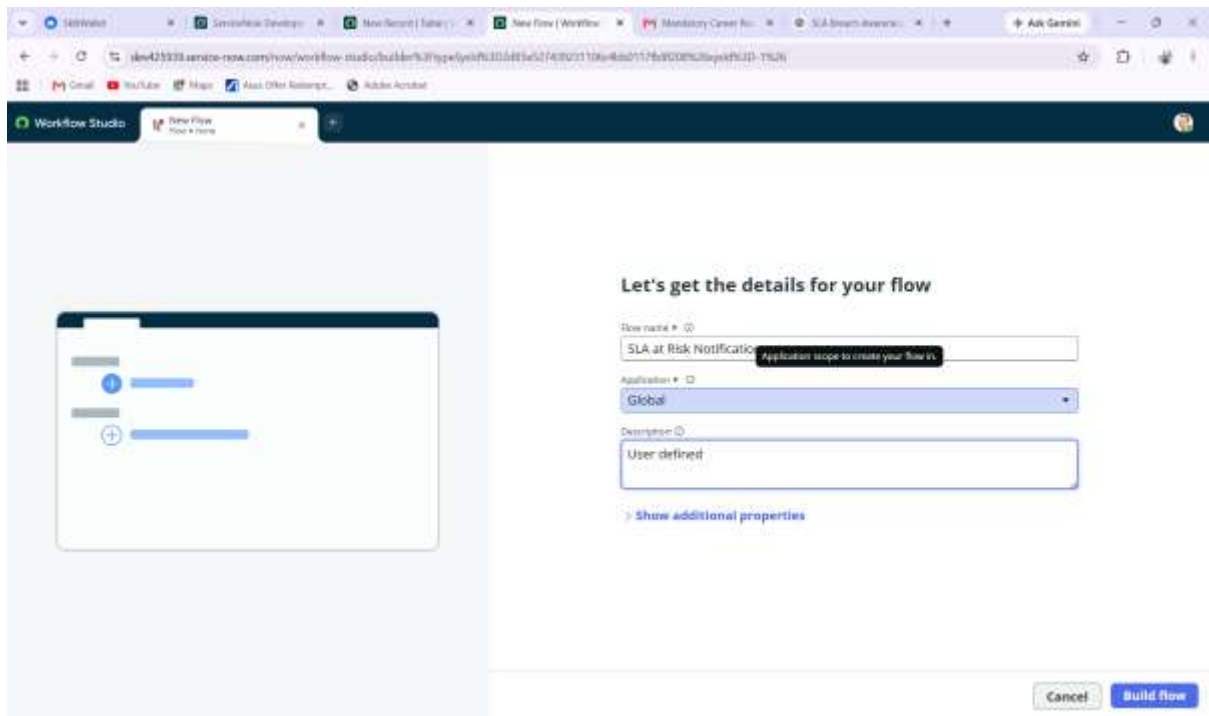

Flow Designer Configuration

Navigation

Process Automation → Flow Designer

Click **New** to create a new Flow.

Step 1: Create Flow

Enter the following details.

Field	Value
Name	SLA at Risk Notification
Application	Global
Description	Automates SLA risk detection, Incident updates, and email notifications when the Incident Resolution SLA reaches 80% of its duration.

Click **Submit**.

Step 2: Configure Flow Trigger

Configure the Flow Trigger as follows.

Property	Value
Trigger	Created or Updated
Table	Task SLA
Run Trigger	Once

Trigger Conditions

Field	Condition
SLA Definition	Incident Resolution – Virtual Agent Governance
Business Elapsed Percentage	Greater than or equal to 80%

Click **Done**.

Step 3: Look Up Incident Record

Add a **Look Up Record** action.

Property	Value
Action	Look Up Record
Table	Incident
Condition	Sys ID = Trigger → Task SLA → Task

This action retrieves the related Incident record associated with the Task SLA.

Click **Done**.

Step 4: Update Incident Record

Add an **Update Record** action.

Property	Value
Record	Incident Record (from Look Up Record)

Update the following fields.

Field	Value
SLA At Risk	True
Work Notes	SLA crossed 80%, Governance Activated

Click **Done**.

This step marks the Incident as approaching SLA breach and records the governance action in the work notes.

Step 5: Send Email to Incident Assignee

Add a **Send Email** action.

Property	Value
----------	-------

Target Record	Incident
---------------	----------

To	Incident → Assigned To → Email
----	--------------------------------

CC	None
----	------

BCC	None
-----	------

Subject

⚠ **SLA At Risk – Immediate Action Required – \${Incident Number}**

Email Body

Hello \${Assigned To},

The SLA for Incident \${Incident Number} has reached a critical threshold.

Please acknowledge the SLA risk and provide the required breach justification immediately.

You can also complete this action using the ServiceNow Virtual Agent.

Steps:

1. Open the Service Portal.
2. Click the Virtual Agent (Chat icon).
3. Select "SLA Breach Awareness & Justification".
4. Follow the guided conversation.

Regards,

ServiceNow System

Note: The dashboard URL can be added later after the SLA Governance Dashboard has been created.

Click **Done**.

Step 6: Send Email to Manager

Add another **Send Email** action.

Property	Value
----------	-------

Target Record	Incident
----------------------	----------

To	Incident → Assigned To → Manager → Email
-----------	--

CC	None
-----------	------

BCC	None
------------	------

Subject

View SLA Governance Dashboard

Email Body

Hello \${Manager Name},

The SLA for Incident \${Incident Number} has reached a critical threshold.

Please review the SLA Governance Dashboard to monitor the Incident and team performance.

Dashboard Link:

[https://dev352797.service-now.com/\\$pa_dashboard.do?sysparm_dashboard=99276f650b5a230024f8ae9b37673aad&sysparm_tab=77a7ef650b5a230024f8ae9b37673a7d](https://dev352797.service-now.com/$pa_dashboard.do?sysparm_dashboard=99276f650b5a230024f8ae9b37673aad&sysparm_tab=77a7ef650b5a230024f8ae9b37673a7d)

Regards,

ServiceNow System

Click **Done**.

Step 7: Activate the Flow

After verifying all actions:

1. Click **Save**.
2. Click **Activate**.
3. Confirm activation.

The flow is now ready to monitor Task SLA records automatically.

UI Policy Configuration

To ensure governance compliance, create a UI Policy on the **Incident** table.

Condition

SLA At Risk = True

UI Policy Actions

Field	Mandatory Visible Read Only		
SLA Breach Reason	Yes	Yes	No
SLA Breach Justification	Yes	Yes	No
SLA Acknowledgement	Yes	Yes	No

When an Incident is marked as **SLA At Risk**, users cannot save or resolve the Incident until these mandatory fields are completed.

Flow Execution Process

1. Task SLA reaches **80%** of business elapsed time.
2. Flow Designer trigger executes automatically.
3. Related Incident record is retrieved.
4. Incident is marked **SLA At Risk**.
5. Work Notes are updated.
6. Email notification is sent to the Incident assignee.
7. Email notification is sent to the assignee's manager.
8. UI Policies enforce mandatory governance fields.
9. User provides acknowledgement and justification.
10. SLA governance data becomes available for reporting and dashboards.

Deliverables

- SLA at Risk Notification Flow
- Task SLA Trigger Configuration
- Incident Lookup Action
- Incident Update Action
- Assignee Email Notification
- Manager Email Notification

- UI Policy Configuration
 - Automated SLA Governance Workflow
-

Benefits

- Proactive identification of SLA risks.
 - Automatic Incident updates without manual effort.
 - Immediate notification to assignees and managers.
 - Improved accountability through mandatory documentation.
 - Standardized governance process.
 - Better SLA compliance.
 - Reduced manual monitoring.
 - Audit-ready activity records.
-

Conclusion

The **Notification Configuration using Flow Designer & UI Policy Creation** phase transforms SLA monitoring into a proactive governance process. By combining Flow Designer automation with dynamic UI Policies, the system automatically detects incidents nearing SLA breach, updates Incident records, notifies stakeholders, and enforces mandatory documentation. This zero-code implementation improves operational efficiency, enhances accountability, and provides a reliable foundation for Virtual Agent interactions, dashboards, and audit-ready SLA governance.
