

Reporting & Dashboards

Overview

The **Reporting & Dashboards** phase focuses on providing real-time visibility into SLA governance and operational performance. Using ServiceNow's reporting capabilities, multiple reports are created to analyze SLA breaches, user accountability, assignment group performance, acknowledgement status, and pending justifications.

These reports are consolidated into a centralized **SLA Governance & Accountability Dashboard**, enabling managers and stakeholders to monitor SLA compliance, identify recurring issues, and make informed decisions based on live operational data.

The reporting solution uses native ServiceNow reporting features without custom scripting, ensuring a scalable and maintainable approach to SLA performance monitoring.

Objectives

The objectives of this phase are to:

- Monitor SLA compliance in real time.
 - Analyze SLA breaches by category and assignment group.
 - Measure user acknowledgement of SLA risks.
 - Track assignee performance.
 - Identify incidents with missing justifications.
 - Visualize SLA performance trends.
 - Provide managers with actionable insights through dashboards.
-

Navigation

Navigate to:

Platform Analytics Administration → Reports

Click **Create New** to create a report.

Configuration

Property	Value
Report Name	SLA Breaches by Assignment Group
Source Type	Table
Table	Incident
Visualization	Bar Chart
Group By	Assignment Group
Filter Condition	SLA At Risk = True

Expected Outcome

The report compares assignment groups based on the number of SLA-risk incidents, helping identify teams that require additional support or process improvements.

Report 3 – Acknowledged vs Unacknowledged Breaches

Purpose

This report measures user compliance by comparing incidents where SLA risks have been acknowledged against those still awaiting acknowledgement.

Configuration

Property	Value
Report Name	Acknowledged vs Unacknowledged Breaches
Source Type	Table
Table	Incident
Visualization	Pie Chart
Group By	SLA Acknowledgement
Filter Condition	SLA At Risk = True

Expected Outcome

The report provides a clear visual representation of user acknowledgement status, helping managers monitor governance compliance.

Report 4 – Top Assignees with SLA Violations

Purpose

This report highlights users responsible for the highest number of SLA-risk incidents, allowing managers to evaluate individual performance and provide additional support where needed.

Configuration

Property	Value
Report Name	Top Assignees with SLA Violations
Source Type	Table
Table	Incident
Visualization	Bar Chart
Group By	Assigned To
Filter Condition	SLA At Risk = True

Expected Outcome

The report ranks assignees according to the number of SLA-risk incidents assigned to them, supporting performance reviews and workload management.

Report 5 – Pending Justifications

Purpose

This report identifies incidents where SLA governance is incomplete because the required breach justification has not yet been provided.

Configuration

Property	Value
Report Name	Pending Justifications
Source Type	Table
Table	Incident

Property	Value
----------	-------

Visualization	List
---------------	------

Filter Condition SLA At Risk = True AND SLA Breach Justification is Empty

Display Columns

Configure the report to display the following columns:

- Incident Number
- Short Description
- Assigned To
- SLA Breach Reason

Expected Outcome

Managers can quickly identify incidents requiring follow-up to ensure governance documentation is completed.

Report 6 – SLA Performance Trend

Purpose

This report provides a trend analysis of incidents over time, allowing stakeholders to monitor changes in SLA performance and identify recurring patterns.

Configuration

Property	Value
----------	-------

Report Name	SLA Performance Trend
-------------	-----------------------

Source Type	Table
-------------	-------

Table	Incident
-------	----------

Visualization	Bar Chart
---------------	-----------

Group By	Opened
----------	--------

Additional Group By SLA At Risk

Expected Outcome

The report illustrates SLA performance trends over time, helping managers evaluate whether SLA compliance is improving or declining.

Reports Created

The following reports were developed as part of the SLA governance solution:

Report Name	Visualization Purpose	
SLA Breaches by Reason	Pie Chart	Analyze breach reasons
SLA Breaches by Assignment Group	Bar Chart	Compare team performance
Acknowledged vs Unacknowledged Breaches	Pie Chart	Measure SLA acknowledgement
Top Assignees with SLA Violations	Bar Chart	Evaluate assignee performance
Pending Justifications	List	Identify missing governance documentation
SLA Performance Trend	Bar Chart	Monitor SLA performance over time

Dashboard Configuration

After creating the reports, they are added to a centralized dashboard.

Dashboard Name

SLA Governance & Accountability Dashboard

Dashboard Widgets

The dashboard includes the following widgets:

- SLA Breaches by Reason
- SLA Breaches by Assignment Group
- Acknowledged vs Unacknowledged Breaches
- Top Assignees with SLA Violations
- Pending Justifications
- SLA Performance Trend

The widgets are arranged to provide managers with a comprehensive, real-time view of SLA governance metrics.

Benefits

- Real-time monitoring of SLA compliance.
 - Centralized visibility into SLA governance.
 - Identification of recurring SLA breach causes.
 - Improved accountability through acknowledgement tracking.
 - Better workload management across assignment groups.
 - Faster identification of incomplete SLA documentation.
 - Data-driven decision-making for managers.
 - Enhanced transparency and audit readiness.
-

Validation

After configuration, verify that:

- All six reports are created successfully.
 - Each report displays the correct visualization type.
 - Filter conditions return the expected data.
 - Reports refresh with current Incident information.
 - The dashboard includes all configured reports.
 - Dashboard widgets display accurate and real-time SLA metrics.
-

Expected Outcome

Upon completion of this phase:

- Managers can monitor SLA compliance through a single dashboard.
 - SLA breach trends and governance metrics are available in real time.
 - Assignment group and assignee performance can be evaluated.
 - Missing breach justifications are easily identified.
 - Decision-making is supported through accurate reporting and visual analytics.
-

Conclusion

The **Reporting & Dashboards** phase enhances the **Virtual Agent–Driven SLA Breach Awareness & Justification System** by transforming SLA governance data into meaningful operational insights. Through six dedicated reports and the **SLA Governance & Accountability Dashboard**, managers gain real-time visibility into SLA risks, breach reasons, user acknowledgements, assignee performance, and compliance trends. This centralized reporting capability improves accountability, supports proactive management, and enables data-driven decisions while maintaining complete audit readiness within the ServiceNow platform.
