

Test Case 4 – SLA Risk Email Notification

Objective

To verify that email notifications are sent to the assigned user and the assigned user's manager when an Incident reaches the SLA risk threshold.

Steps

1. Allow the Incident SLA to reach **80%** or above.
2. Check the assignee's inbox or **Notification Preview**.
3. Open the SLA warning email sent to the assignee.
4. Verify the manager receives the SLA governance email.

Expected Result

- Email notification is sent to the **Assigned To** user.
- Email notification is sent to the **Assigned To's Manager**.
- The assignee's email contains the SLA warning and Service Portal/Virtual Agent instructions.
- The manager's email contains the **SLA Governance Dashboard** link.

Actual Result

Email notifications were successfully delivered to both the assigned user and the assigned user's manager. The emails contained the required SLA warning message and the appropriate Service Portal/Dashboard link.
